

## Craft Rite Paw Print Instructions

**1** Remove the Craft Rite Paw Print Clay from its foil package when you are ready to use. Do not open the package until you are ready to use the clay.

**2** Knead the Craft Rite Paw Print Clay with clean, dry hands until it is smooth and has no air pockets.

**3** Remove the adhesive tape and shape the Molding Ring into a circle the size you want your Paw Print to be.

**4** Place the Clay on wax paper, aluminum foil or a flat, non stick surface and flatten into a circle about the size you want your Paw Print memento to be – approximately 12-13 cm. To flatten the clay, you may use the hole punching stick to roll flat.

**5** Gently press your pet's clean dry paw into the Clay.

**6** Place the molding ring around the paw print so the paw print is centered. Then press the molding ring into the clay to make a circle.

**7** Gently remove excess clay and discard. Leave molding ring in place.

**8** Make 2 holes in the clay above the paw print using the Hold Punching Stick. You may wet the stick before using to prevent it from sticking to the clay.

**9** Allow your finished Craft Rite Paw Print to dry in the molding ring for 10-11 hours. When the top is dry, flip over to allow the bottom to dry. You may need to allow the clay to dry for up to 6-8 days.

**10** Once your Craft Rite Paw Print is completely dried, remove the molding ring then tie the ribbon through the 2 holes you have made.

**11** Set the completed Craft Rite Paw Print on its stand in a special place.

*Voilà! Your pet craft project is now complete to be displayed!*

## Talking Dog Collar Instructions

To Record a new message, press and hold the Green button while speaking clearly into the Talking Dog Collar.

Make sure to say your pet's name, address and phone number so you can be contacted in case he or she gets lost.

My name is \_\_\_\_\_  
I live at \_\_\_\_\_  
My # is \_\_\_\_\_

Release the Green button when you are finished recording.

Press the Red button anytime you want to play back the recording. Repeat these steps if you want to record a new message.

### Changing The Filing Head:

1. Turn off PediPaws and remove batteries before opening the orange protective cap.
2. Unscrew the orange protective cap.
3. Holding the Filing Head between your fingers firmly, loosen and remove the single screw on the top of the Filing Head by turning the screw counter clockwise with Philips head screwdriver. (Figure 3)
4. Remove old Filing Head and replace with a new one.
5. Insert and tighten screw on top of wheel. Do not over tighten.
6. Screw on orange protective cap and reinsert batteries.

### Emptying The Filings:

1. Turn off PediPaws and remove batteries before opening the orange protective cap.
2. Unscrew the orange protective cap.
3. Dump filings in to trash.
4. Screw on orange protective cap and reinsert batteries.

### CAUTION

**WARNING:** Please read the following product warnings and all product use instructions before using PediPaws, and make sure you understand them to avoid causing injury to your pet and to yourself.

- For intended use only.
- For external use only, do not insert into any body cavity.
- PediPaws is intended for nail trimming of dogs and cats only. Not for human or other animal use.
- Use PediPaws on healthy animals only. Check with your vet if you have any concerns.
- Never use without orange protective cap screwed on securely. Use without protective guard can cause personal or pet injury.
- Not for use in or near water. Electric shock may result.
- Keep loose fitting clothing, jewelry or long hair away from PediPaws. Injury may result.
- Wear protective glasses or goggles to prevent eye injury from flying particles.
- PediPaws is not intended for use by children. Keep out of reach of children.
- Do not file a pet's nail for more than 4 seconds at one time. If your pet appears to be in pain while using the PediPaws, or if the nail starts bleeding, stop use immediately.
- Only use PediPaws with size C alkaline batteries. Use of unauthorized batteries may damage PediPaws and or cause electric shock.
- Always follow the PediPaws product use instructions.

**The Incredible Pet Nail Trimmer**

# PediPaws™

**Won't Crack, Splinter, or Break Nails!**

**Instruction Guide**

# PediPaws™

Congratulations on purchasing the PediPaws™! The precision rotary file designed to make trimming your pet's nails safer, easier and more fun! Before you begin, read ALL instructions carefully to ensure a safe and stress-free experience for you and your pet.

## Installing Batteries:

- Always use fresh alkaline batteries.
- Unscrew the cap counter clockwise on the bottom of PediPaws™.
- Insert two C batteries as indicated on the unit.
- Securely fasten the battery cap.

## Using PediPaws™ for the first time:

When using PediPaws for the first few times, your pet must become familiar with the sight and sound of the product. Because PediPaws is different from most nail trimmers, many pets are initially startled. But with the right amount of time taken to develop a familiarity with the PediPaws, your pet will become comfortable. You must know the temperament of your pet before proceeding and be careful not to push them too far too fast.

1. While the unit is turned off, show the PediPaws to your pet, and allow him or her to examine it. You may want to give a treat and/or praise at the same time. Do this in a location where your pet is at ease.
2. Repeat step one, but this time turn on the PediPaws.
3. Once your pet is comfortable with the sound of the PediPaws, gently try and file a single nail for no more than about 2 seconds. Give a treat and/or praise immediately afterward, and take a short break before trying to file a second nail.
4. If your pet allows you to file one or two nails at a time, they are doing great, and you may slowly try a full PediPaws pedicure.

5. If your pet continues to resist, even after extensive training, you can try to hold your pet securely while demonstrating to them that there is nothing to fear. Have your pet lie down on his or her stomach with paws out in front.

6. Reach under your pet's front paw as shown in Figure 1, with your body above him or her. Rest your body on top of your pet for stability, but don't put any excessive weight on your pet.

Figure 1

7. Begin the PediPaws pedicure slowly, while stabilizing your pet. Don't allow them to resist, and they will eventually trust you as their owner and realize that the PediPaws is nothing to be afraid of. It is important to maintain control of your pet here, and remember that you are in charge. The more assertive you are, the more comfortable your pet will become.
8. The position can be used for front or back paws. Simply turn your pet around to trim the back paws.
9. Remember, this process takes time and patience, but your pet will eventually love getting their nails trimmed using the PediPaws.

**NOTE:** Only use PediPaws™ on an animal you are familiar with. Do not put your safety at risk. If an animal becomes aggressive, stop using PediPaws™ immediately.

## How to use PediPaws™:

1. Always make sure that the orange protective cap is screwed on securely before filing.
2. You never want to file off too much of your pet's nail. For the first few uses, be cautious and only file enough to shape and smooth your pet's nails. In later sessions, you will be able to reduce the length of the

nail more significantly.

3. For all nail trimming sessions, make sure you are in a familiar location where your pet is at ease. Use your pet's favorite bed, or a cozy couch, for instance.
4. The proper way to hold your pet's paw is shown in Figure 2. Grasp the paw in between two fingers to extend and support each nail as you file.
5. Gently insert a nail into the opening in the orange protective cap, and only file each nail for about 4 seconds maximum. Constantly move between different nails. File from the bottom to top for a smooth round edge.
6. After you and your pet have had several initial PediPaws pedicures, you can try and get closer to the quick. Remember, the quick is the area of the nail that contains blood supply, and is easily damaged by traditional nail clippers. The PediPaws allows you to go slowly enough to have precise control of how close to the quick you want to get. On lighter nailed animals, the quick appears as a darker area in the center of the nail. If you can't see the quick directly, you know you are getting close when you encounter a softer area of the nail while filing. The quick is right behind this layer.
7. Remember to always shape and smooth the nail in a round motion, filing both the top and bottom evenly.

## After Use:

Turn off PediPaws™, empty filings, wipe off with a dry cloth and store in a safe, dry location away from children. Remove batteries from PediPaws™ if it will not be used again for a period of time.

# INSTRUCTIONS

## Shed Ender™

Professional De-Shedding Tool

Congratulations on your purchase of Shed Ender™—the professional de-shedding tool that is changing the way people groom their pets.

**Carefully read and understand all of the following directions before using Shed Ender™.**

### IMPORTANT:

Shed Ender™ is designed for use on all breeds of shedding cats and dogs. If you are not sure whether your pet is of a shedding breed, check with a Veterinarian.

### GETTING STARTED:

We recommend using Shed Ender™ outdoors or in an area of your home where shedding hair can be easily swept up or vacuumed when you are finished.

(continued on back) →

1. Shed Ender™ comes assembled and ready for RIGHT HAND USE (SEE FIG. 1).
2. For LEFT HAND USE, remove the caps located on the back of the handle then unscrew and remove the "Brush Head" by pulling it down. Then turn the "Brush Head" over and insert it back into the handle. Place the screws back in, tighten securely, and replace the caps. Shed Ender™ is now ready for LEFT HAND USE (SEE FIG. 2).

### IMPORTANT (For Best Results:)

When de-shedding your pet with Shed Ender™, the front of the "Brush Head" which is marked "Front" should always face and move in the direction of your pet's natural hair growth.

"Brush Head" Position For Right Hand Use

"Brush Head" Position For Left Hand Use

### DIRECTIONS:

1. Before using Shed Ender™ on your pet:
  - Inspect your pet's coat for tangles and/or matting. Remove any tangles and matted hair.
  - Inspect your pet's skin for cuts, bruises, sores or other skin conditions. Consult a Veterinarian as necessary. Avoid using Shed Ender™ on areas of the coat directly above the skin where such conditions are present.
  - For best results, thoroughly wash and dry your pet before using Shed Ender™.
2. With the front of the "Brush Head" which is marked "Front" facing in the same direction as your pet's natural hair growth, use gentle, long strokes the way you would a hair brush on your own hair, to remove shedding hair. Pull up and away at the end of each stroke. Remove built-up hair from the "Brush Head" as necessary. Do NOT apply too much downward pressure when using, doing so may irritate your pet's skin. If skin irritation or redness occur, stop use immediately. Use extra care when using Shed Ender™ near sensitive areas such as the stomach, nipples, genitals and anus.
3. When you are finished, place the "Storage Cover" on the "Brush Head" for safe keep-ing until next use.
