

## English

Thank you for purchasing Pest Reject. Please read the safety instructions carefully before using this device. They are provided to help you use the device correctly and get the most out of your Pest Reject. After reading, keep the manual for future reference.

Pest Reject is a safe and innovative device that uses ultrasound and electromagnetic technology to repel pests. It emits ultrasound waves that cause discomfort to cockroaches, spiders, ants, bugs and rodents. Electromagnetism works using the wiring of your home or office, changing the surrounding energy field and creating an unfriendly environment for pests. This system irritates pests and drives them away from their nests without killing them.

Pest Reject does not harm the environment since it contains no toxic chemicals or poisons. It is also safe for use around people and household pets.

### WARNING

- Do not use Pest Reject if you have pet rabbits or rodents such as hamsters, as the device may cause them discomfort.
- The device does not affect other household pets.
- The device does not affect computers or household appliances.
- Keep Pest Reject away from water, as well as flower vases and other objects that contain liquid.
- When first using Pest Reject, it is normal for pests to become more active and come out of hiding. This happens because they feel discomfort and try to escape.
- Best results with cockroaches, spiders, ants and rodents are achieved after 1 to 3 weeks. Although they are instantly affected by the device, these animals may at first refuse to leave.
- When using Pest Reject to drive bugs away, remember to leave a window or door open to let them escape.
- Do not use poisons or other chemical products while using the device. These chemicals tend to attract pests while Pest Reject drives them away. Poisons and other chemical products have the opposite effect of Pest Reject.
- Keep in mind that there are more resistant cockroach species that take longer than normal to drive away from your home.
- Make sure not to leave food out, as this can attract new pests.
- Do not leave doors, windows, or garage and basement doors open so as not to let new pests into your home.
- The device does not affect household pets, computers or household appliances.
- Keep out of reach of children.
- This product was designed for indoor use. Do not use outdoors.
- Only use in accordance with these instructions.

### INSTRUCTIONS FOR USE

1. Plug your Pest Reject into the mains and check if the power light is on.
2. The red light is on when the device is working. The yellow light indicates the electromagnetic function and the green light the ultrasound function. The yellow and green lights blink when the device is working properly.
3. The device also has a night light that can be turned on by pressing the small white button on top of the device. To turn off the night light, simply press the same button again.
4. Leave the device on 24 hours a day, 365 days a year.
5. If you need a second device, make sure it is plugged in far enough away from your other Pest Reject. One Pest Reject unit covers an area of approximately 200 m<sup>2</sup>.

- a) Night light ON/OFF button
- b) Night light
- c) Red light / Power on
- d) Yellow light / Electromagnetic function
- e) Green light / Ultrasound function

### MAINTENANCE

Pest Reject does not require maintenance. It can be used for an unlimited period of time.

### TECHNICAL SPECIFICATIONS

Frequency: 50 / 60 Hz

Power: 230 V AC
